

AGL Duct & Fittings from J F Plastics

J F Plastics offer a full range of uPVC Airfield Ground Lighting duct and associated bends, couplers, bellmouths and fabricated junctions.

Fittings are available in two diameters, either 45.2mm/50mm or 54.1mm/60.3mm (ID/OD).

We offer a speedy order turnaround and can even deliver direct to air-side via our own transport .

1. Bends

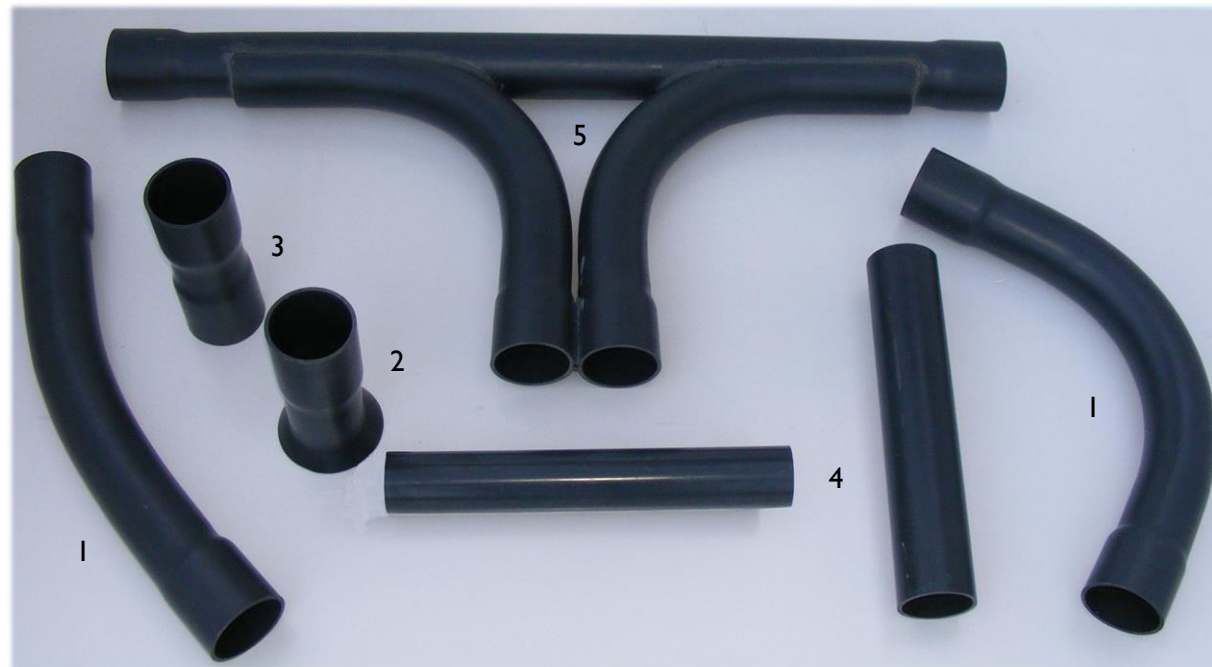

Our drawn bends are produced with a centre-line radius of 250mm as standard and are para-seal socketed on both ends to accept connections.

2. Bellmouths

We offer push-fit bellmouths, used to aid smooth, snag-free cable entry.

3. Couplers

Couplers for joining lengths of duct are supplied with a push-fit socket. Socket depths are 50mm and 70mm for the respective pipe diameters.

4. Duct

Straight duct lengths are available in 3 or 6 metre lengths.

5. Double Swept Tee Junctions

Designed to allow power or signal cables to be daisy-chained between lighting points.

The junctions provide additional cable protection, make installation of cable easier and also help keep cables organised within the trench.
